

Data verification guide

What every indicator means, which public table it comes from, how it is computed, and how anyone can check it against the source in under a minute.

Dashboard: real-estate-war-lord.github.io/am-dashboard-dk · source code github.com/real-estate-war-lord/am-dashboard-dk

Data build in this guide: 2026-09-15 (StatBank pulls 14 Sep 2026 · BBR register 2026-09-18) · **Independent re-check of the sources:** 22 September 2026

Result of the re-check: 26 of 28 figures reproduce exactly from the public sources; the two Finans Danmark price series had been revised by the source by a fraction of a percent since the pull (section 8). No hand-typed numbers exist in the dashboard except the two rent files listed in section 2.

1. How the dashboard gets its data
2. The five source systems
3. How to verify any figure (three ways)
4. Indicator catalogue — municipalities and postal codes (29)
5. Indicator catalogue — Copenhagen quarters (19)
6. Buildings layer (BBR + DAR) and how to check one building
7. Market view — national series (13)
8. Worked verification, København, 22 September 2026 — with screenshots of the source responses
9. Caveats every reader should know
10. Appendix — source stamps and dashboard screens

1. How the dashboard gets its data

Everything on the page is produced by a scripted pipeline in the repository; there is no spreadsheet in between. A monthly job re-runs it, and the build date is printed in the dashboard footer (*Data information*) and in *Market > Sources*.

fetch — `scripts/fetch_statbank.py` posts the selections in `config/indicators.json` to the StatBank API (POST `https://api.statbank.dk/v1/data`, format CSV, `valuePresentation=Code`) and stores every response untouched as `data/raw/<db>_<TABLE>_<date>.csv` together with the table's `tableinfo` (variables, codes, "updated" stamp). `scripts/fetch_bbr.py` / `fetch_dar.py` pull the building register through Datafordeler's GraphQL service. Raw files are not committed (they are re-creatable), the processed files are.

build — `scripts/build_makro.py`, `build_cph.py`, `build_bbr.py`, `build_market.py` apply the computations listed in the catalogue below (one named `calc` per indicator) and write `data/processed/*.json`.

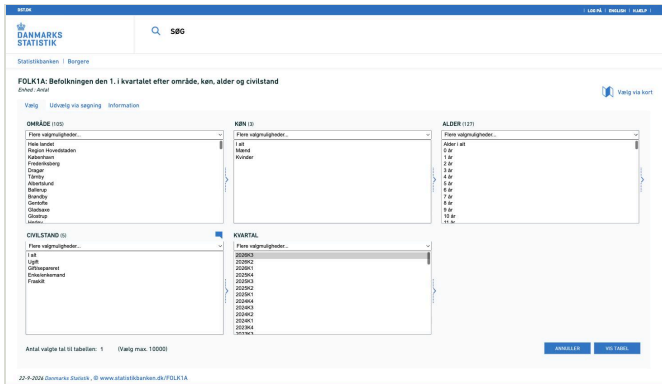

publish — `scripts/build_dashboard.py` inlines the processed data into one HTML file, which GitHub Pages serves. The "as of" period next to every indicator is taken from the raw data itself, never typed.

Why the numbers are reproducible: the selection codes in the catalogue are exactly what the pipeline sends; the verification links in this guide send the same codes for one area through the public API's GET interface, so the response you see is the same cell the dashboard used (subject to later revisions by the source).

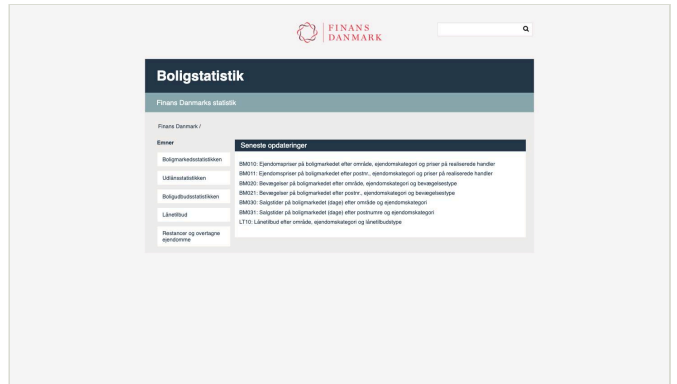

2. The five source systems

SOURCE	WHAT IT PROVIDES HERE	UPDATED	ENTRY POINTS
Danmarks Statistik — Statistikbanken	Population, income, households, housing benefit, dwelling stock (BOL101/BOL106), unemployment, education, ancestry, construction, and the national indices in the Market view. 24 tables.	Table by table; each has an "updated" stamp (appendix). Free reuse with attribution.	statistikbanken.dk · API docs dst.dk > API · tableinfo example
Finans Danmark — Boligmarkedsstatistikken (StatBank sub-database <code>s20</code>)	Realised and asking prices per m ² (BM010 / BM011), days on market (BM030 / BM031), homes for sale (UDB010). Municipality and postal-code level.	Quarterly (prices) and monthly (supply). Recent quarters are revised as late trades are registered.	rkr.statistikbank.dk · API s20
Københavns Kommune — Statistikbanken (sub-database <code>s30</code>)	The 67 quarters (kvarterer): population, age, households, income, education, tenure, dwelling size, year built, unemployment. Boundaries from opendata.dk (CC BY 4.0).	Quarterly / annual per table.	kk.statistikbank.dk · API s30
BBR — Bygnings- og Boligregistret via Datafordeleren (Klimadatastyrelsen) + DAR addresses	Every current dwelling (status 6, boligtype 1–5) and residential building in Denmark: tenure, area, rooms, year built, use, coordinate; addresses and BFE property numbers for the Buildings layer.	Register snapshot on the fetch date (2026-09-18); owner-reported data, continuously updated at the source. Free API key.	datafordeler.dk > BBR GraphQL · public lookup of any building: bbr.dk / ois.dk

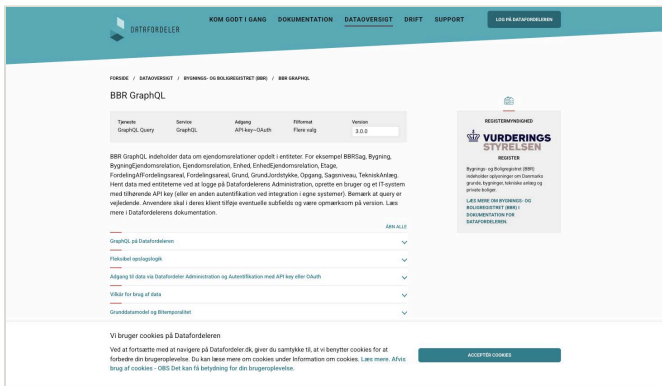

SOURCE	WHAT IT PROVIDES HERE	UPDATED	ENTRY POINTS
Rent statistics — Social- og Boligstyrelsen (boligstat.dk) and Landsbyggefonden	Private rental rent DKK/m ² /yr per municipality (boligstat.dk, housing-benefit register × BBR, 2026) and social-housing (almene) rent DKK/m ² /yr, family dwellings, 1 Jan 2026 (LBF Huslejestatistik, Tabel 7).	Annual. These are the only two hand-collected files (data/external/rent_private.csv, rent_social.csv), logged in data/external/SOURCES.md with date and URL.	boligstat.dk > Huslejestatistik · lf.f.dk > Huslejestatistik 2026

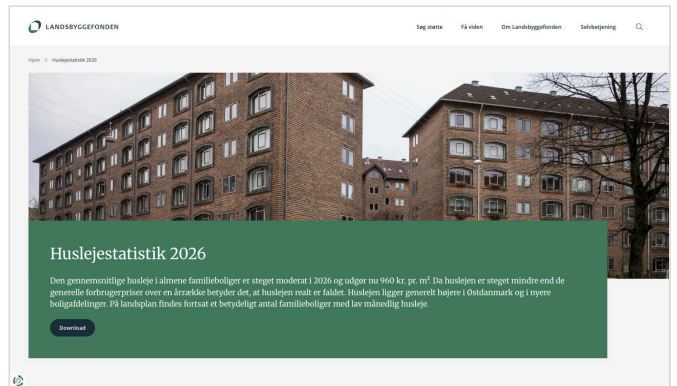

Statistikbanken web table FOLK1A — the same codes as in the catalogue (OMRÅDE = København, KØN = I alt, ALDER = Alder i alt, KVARTAL = 2026K3).

Finans Danmark's statistics bank (rkr.statistikbank.dk): BM010/BM011 prices, BM030/BM031 days on market.

Datafordeleren — BBR GraphQL v3 (the service behind the Buildings layer and the BBR indicators).

Landsbyggefonden, Huslejestatistik 2026 — social-housing rent, basistabeller (Tabel 7) downloaded from this page.

3. How to verify any figure — three ways

- One-click API link (fastest).** Every row in the catalogue has a *Verify* link. It opens the public StatBank API in the browser with the exact table, codes and period for København (or postal code 2100) and renders the cells as a small HTML table — no login, no key. Compare with the dashboard value in the column next to it; apply the computation in the row (e.g. " $\div$ total $\times$ 100"). To check another area, replace the area code in the address bar (OMRÅDE=101 → OMRÅDE=751 for Aarhus; postal codes use PNR20=). Municipality codes are shown on every area page and in the Table view.
- Web table (for colleagues who prefer clicking).** Open the *web table* link, pick the same codes (the catalogue lists them in the table's own variable names), press *Vis tabel*. The dashboard's *Market > Sources* panel shows the "updated" stamp of every table the build used, so you can tell whether the source has published a newer period since.

- 3 **Re-run the pipeline.** make fetch && make build in the repository re-downloads every table and rebuilds the page; docs/RUNBOOK.md describes each step, docs/DATA_MAP.md documents every table and code. The sidebar's *Export data* button downloads all levels, indicators and years as one CSV for independent recomputation.

In the dashboard, ⓘ details next to any indicator shows definition, source table, as-of period, coverage and the caveat.

4. Indicator catalogue — municipalities and postal codes

Column "København" shows the dashboard's current value for København municipality (code 101), which the *Verify* links reproduce. "Level" is the finest geography the indicator natively exists at: *postnr*-level indicators have their own postal-code values; *kommune*-level ones are shown on postal codes with the municipality value, marked ° in the dashboard.

Demographics

INDICATOR	DEFINITION	SOURCE TABLE & SELECTION	COMPUTATION	KØBENHAVN	VERIFY (OPENS THE SOURCE)
Population growth % / yr · postnr level · key growth	Population change over the last 12 months, % (same period previous year). Average dwelling size m ² · kommune level · key avg_m2	Average floor area per dwelling.	BOL106 (Danmarks Statistik) OMRÅDE=all; ENHED=GN SAB; ANVENDELSE=TOT web table · tableinfo	value used as published	82 m²	BOL106 · København

Housing stock (BBR)

INDICATOR	DEFINITION	SOURCE TABLE & SELECTION	COMPUTATION	KØBENHAVN	VERIFY (OPENS THE SOURCE)
Rented dwellings (BBR) % of dwellings · postnr level · key renters_br	Dwellings registered as rented (enh045 = 1, includes andel) as % of dwellings with a known tenure — BBR unit register, postal-code level. △ BBR snapshot (no history). Owner-reported register data; tenure 'rented' includes cooperative (andel) dwellings.	BBR via Datafordeler GraphQL — BBR_Enhed (status 6, boligtype 1–5), BBR_Bygning datafordeler.dk	aggregated from the BBR unit register (see section 6)	75 %	—
Unoccupied dwellings (BBR) % of dwellings · postnr level · key vacant_br	Dwellings registered as 'not in use' (enh045 = 3) as % of dwellings with a known tenure. Owner-reported and slow to update — use as a relative signal between areas, not as a vacancy rate. △ BBR snapshot (no history). Owner-reported register data; tenure 'rented' includes cooperative (andel) dwellings.	BBR via Datafordeler GraphQL — BBR_Enhed (status 6, boligtype 1–5), BBR_Bygning datafordeler.dk	aggregated from the BBR unit register (see section 6)	5.8 %	—
Average dwelling size (BBR) m² · postnr level · key avg_m2_br	Mean registered dwelling area (enh026), all dwellings. △ BBR snapshot (no history). Owner-reported register data; tenure 'rented' includes cooperative (andel) dwellings.	BBR via Datafordeler GraphQL — BBR_Enhed (status 6, boligtype 1–5), BBR_Bygning datafordeler.dk	aggregated from the BBR unit register (see section 6)	82 m²	—
Small dwellings < 50 m² (BBR) % of dwellings · postnr level · key small_br	Dwellings under 50 m² as % of dwellings with a registered area — the studio / one-room segment. △ BBR snapshot (no history). Owner-reported register data; tenure 'rented' includes cooperative (andel) dwellings.	BBR via Datafordeler GraphQL — BBR_Enhed (status 6, boligtype 1–5), BBR_Bygning datafordeler.dk	aggregated from the BBR unit register (see section 6)	14 %	—
Dwellings built 2010+ (BBR) % of dwellings · postnr level · key new_stock_br	Dwellings in buildings commissioned 2010 or later (byg026) as % of dwellings with a known year. △ BBR snapshot (no history). Owner-reported register data; tenure 'rented' includes cooperative (andel) dwellings.	BBR via Datafordeler GraphQL — BBR_Enhed (status 6, boligtype 1–5), BBR_Bygning datafordeler.dk	aggregated from the BBR unit register (see section 6)	12 %	—

INDICATOR	DEFINITION	SOURCE TABLE & SELECTION	COMPUTATION	KØBENHAVN	VERIFY (OPENS THE SOURCE)
Multi-dwelling buildings (BBR) % of dwellings · postnr level · key flats_bbr	Dwellings in multi-dwelling buildings (byg021 = 140) as % of dwellings. ⚠ BBR snapshot (no history). Owner-reported register data; tenure 'rented' includes cooperative (andel) dwellings.	BBR via Datafordeler GraphQL — BBR_Enhed (status 6, boligtype 1–5), BBR_Bygning datafordeler.dk	aggregated from the BBR unit register (see section 6)	85 %	—
Dwellings per building (BBR) dwellings / building · postnr level · key dw_per_bld	Dwellings divided by residential buildings — building scale: 1–2 = houses, 10+ = blocks. ⚠ BBR snapshot (no history). Owner-reported register data; tenure 'rented' includes cooperative (andel) dwellings.	BBR via Datafordeler GraphQL — BBR_Enhed (status 6, boligtype 1–5), BBR_Bygning datafordeler.dk	aggregated from the BBR unit register (see section 6)	8.8	—

Rents

INDICATOR	DEFINITION	SOURCE TABLE & SELECTION	COMPUTATION	KØBENHAVN	VERIFY (OPENS THE SOURCE)
Private rental rent DKK / m ² / yr · kommune level · key rent_private	Average rent DKK/m ² /yr in private rental dwellings (private udlejningsboliger i alt, all construction years). ⚠ Based on households receiving housing benefit, upscaled to the stock (≈87 % coverage); skews to the cheaper end — asking rents in the market are typically higher. Small municipalities suppressed.	boligstat.dk — Huslejestatistik, <i>Private udlejningsboliger i alt</i> , all construction years, 2026 boligstat.dk > Huslejestatistik (copied by hand into data/external/rent_private.csv)	value used as published	1 637 DKK	—
Social housing rent (almene) DKK / m ² / yr · kommune level · key rent_social	Average rent DKK/m ² /yr in social (almene) family dwellings, 1 Jan 2026.	Landsbyggefonden — Huslejestatistik 2026, basistabeller, Tabel 7 (familieboliger, 1 Jan 2026) lbf.dk > Huslejestatistik 2026 (import_lbf.py → data/external/rent_social.csv)	value used as published	1 077 DKK	—

Prices & market

INDICATOR	DEFINITION	SOURCE TABLE & SELECTION	COMPUTATION	KØBENHAVN	VERIFY (OPENS THE SOURCE)
Realised price, owner-occupied flats DKK / m ² · postnr level · key price_m2	Realised sale price of owner-occupied flats, DKK/m ² , mean of last 4 quarters. ⚠ Postal codes with few trades are suppressed by the source; small-n quarters are noisy. INDICATOR	DEFINITION	SOURCE TABLE & SELECTION	COMPUTATION	MIDDELALDERBYEN
Rented dwellings (BBR) % of dwellings · kvarter level · key renters_bbr	Dwellings registered as rented (enh045 = 1, includes andel) as % of dwellings with a known tenure — BBR unit register, postal-code level. △ BBR snapshot (no history). Owner-reported register data; tenure 'rented' includes cooperative (andel) dwellings.	BBR via Datafordeler GraphQL — BBR_Enhed (status 6, b oligtype 1–5), BBR_Bygning datafordeler.dk	aggregated from the BBR unit register (see section 6)	69 %
Unoccupied dwellings (BBR) % of dwellings · kvarter level · key vacant_bbr	Dwellings registered as 'not in use' (enh045 = 3) as % of dwellings with a known tenure. Owner-reported and slow to update — use as a relative signal between areas, not as a vacancy rate. △ BBR snapshot (no history). Owner-reported register data; tenure 'rented' includes cooperative (andel) dwellings.	BBR via Datafordeler GraphQL — BBR_Enhed (status 6, b oligtype 1–5), BBR_Bygning datafordeler.dk	aggregated from the BBR unit register (see section 6)	10.7 %
Average dwelling size (BBR) m ² · kvarter level · key avg_m2_bbr	Mean registered dwelling area (enh026), all dwellings. △ BBR snapshot (no history). Owner-reported register data; tenure 'rented' includes cooperative (andel) dwellings.	BBR via Datafordeler GraphQL — BBR_Enhed (status 6, b oligtype 1–5), BBR_Bygning datafordeler.dk	aggregated from the BBR unit register (see section 6)	104 m²
Small dwellings < 50 m² (BBR) % of dwellings · kvarter level · key small_bbr	Dwellings under 50 m ² as % of dwellings with a registered area — the studio / one-room segment. △ BBR snapshot (no history). Owner-reported register data; tenure 'rented' includes cooperative (andel) dwellings.	BBR via Datafordeler GraphQL — BBR_Enhed (status 6, b oligtype 1–5), BBR_Bygning datafordeler.dk	aggregated from the BBR unit register (see section 6)	11 %
Dwellings built 2010+ (BBR) % of dwellings · kvarter level · key new_stock_bbr	Dwellings in buildings commissioned 2010 or later (byg026) as % of dwellings with a known year. △ BBR snapshot (no history). Owner-reported register data; tenure 'rented' includes cooperative (andel) dwellings.	BBR via Datafordeler GraphQL — BBR_Enhed (status 6, b oligtype 1–5), BBR_Bygning datafordeler.dk	aggregated from the BBR unit register (see section 6)	1 %

INDICATOR	DEFINITION	SOURCE TABLE & SELECTION	COMPUTATION	MIDDELALDERBYEN
Multi-dwelling buildings (BBR) % of dwellings · kvarter level · key flats_bbr	Dwellings in multi-dwelling buildings (byg021 = 140) as % of dwellings. △ BBR snapshot (no history). Owner-reported register data; tenure 'rented' includes cooperative (andel) dwellings.	BBR via Datafordeler GraphQL — BBR_Enhed (status 6, b oligtype 1–5), BBR_Bygning datafordeler.dk	aggregated from the BBR unit register (see section 6)	78 %
Dwellings per building (BBR) dwellings / building · kvarter level · key dw_per_bld	Dwellings divided by residential buildings — building scale: 1–2 = houses, 10+ = blocks. △ BBR snapshot (no history). Owner-reported register data; tenure 'rented' includes cooperative (andel) dwellings.	BBR via Datafordeler GraphQL — BBR_Enhed (status 6, b oligtype 1–5), BBR_Bygning datafordeler.dk	aggregated from the BBR unit register (see section 6)	5.8

6. Buildings layer (BBR + DAR)

The Buildings mode of the map shows every residential building with two or more dwellings (174 551 buildings nationally) as a dot. The data is the register itself, not a statistic:

- **Source:** Datafordeleren GraphQL BBR/v3 — entities BBR_Enhed (dwelling units, status = 6 current, enh023Bolitetype 1–5) and BBR_Bygning (buildings: byg0260pfoerelsesaar year, byg054AntalEtager floors, byg021BygningensAnvendelse use, byg404Koordinat coordinate in EPSG:25832). Addresses from DAR_Husnummer > DAR_NavngivenVej + DAR_Postnummer; property number from BBR_Bygning.grund > BBR_Grund > BBR_Ejendomsrelation.bfeNummer.
- **Building figures:** dwellings = count of units; rented % = enh045Udlejningsforhold = 1 ÷ units with a known tenure (code 1 rented incl. andel, 2 owner-occupied, 3 not in use); unoccupied % = code 3 ÷ known; Ø size = mean enh026EnhedensSamledeArea; < 50 m² share; rooms from enh031AntalVaerelser.
- **Area figures (group "Housing stock (BBR))":** each unit is placed into its postal code / quarter by its building's coordinate (point-in-polygon against DAGI boundaries); 99.4 % of units get a polygon. Cross-check against Danmarks Statistik: København has 356 649 BBR dwellings (boligtype 1–5, incl. units without residents) vs 348 477 in BOL101 (+2.3 %, definitional — BOL101 excludes some unit types); the average size 81.8 m² (BBR) vs 81.9 m² (BOL106).
- **How to verify one building:** open its card (click the dot or type the address in *Find address*); the card shows the BBR id, the address and the BFE number. Look the address up on bbr.dk (Se BBR-oplysninger) or ois.dk, which show the public BBR record of every building and unit — year built, floors, number of units, areas — and compare. Example below: Borgmestervangen 5, 2200 København N, BFE 10272403, built 2024, 30 floors, 511 dwellings.

Building card in the dashboard (Buildings mode, København) — the fields to compare with bbr.dk / ois.dk.

Announcements of forced sales of real property by type and time		
	2025M08	2026M08
Forced sales of real property total		
	85	76

Fig. 8.28 — Forced sales per month · TVANG1 · API response, 22 September 2026

Reading the two "revised" rows. Finans Danmark restates recent quarters when late registrations arrive. Between the 14 Sep pull and the 22 Sep check the four København quarters moved by -6 to +218 DKK/m² (0.0–0.3 %), shifting the four-quarter mean from 66 463 to 66 502 DKK/m². This is normal for transaction statistics and is why the dashboard is rebuilt monthly and prints its build date; the value is right for its build date, and the current source value is one click away.

9. Caveats every reader should know

- **° = inherited value.** Municipality-level indicators are drawn on postal codes with the municipality's value (marked °). Only indicators with level *postnr* (growth, young, prices, discount, days on market, BBR) differ within a municipality.
- **Suppression.** Finans Danmark suppresses postal codes with too few trades; the dashboard shows – and the Table view leaves the cell empty. Quarters with small populations are noisy for growth.
- **Lags.** Income (INDKP101, IFOR22) is published ~11 months after the year; education (HFUDD11) and housing benefit (BOST63) refer to the previous year; the as-of period is printed next to every indicator and in the chart legend.
- **"Rented" includes andel.** Danmarks Statistik counts residents of cooperative dwellings as tenants (BOL101 UDLFORH = LEJ), so in Copenhagen roughly a third of the "rented" stock is andel. The Copenhagen quarter layer (KKBOL3) separates private rental, andel and almene.
- **BBR is owner-reported.** Tenure and "not in use" flags lag reality; use the BBR vacancy share as a relative signal between areas, never as a vacancy rate. Dwelling counts differ from BOL101 by definition (see section 6).
- **Private rental rent (boligstat.dk)** is computed from households receiving housing benefit and upscaled to the stock (≈ 87 % coverage); it skews to the cheaper end, and small municipalities are suppressed. Asking rents in the market are typically higher.
- **Construction (BYGV33)** is not adjusted for reporting delays; recent quarters are revised upward.

- **Revisions.** All sources may restate recent periods (section 8). The dashboard is a monthly snapshot with a printed build date; the Verify links always show the source as of today.
- **Map colours** are quintile classes of the visible areas (each colour holds a fifth of the areas), so the legend ranges change with the indicator and the zoom level; the underlying values do not.
